

AAGM

The AAGM is a non-penetrating ballast roof mount. The mount is capable of supporting various communication loads, including dishes with diameters up to 10 feet. Mast sizes vary from 3" to 6". The base is designed for standard concrete blocks to be placed in the trays as ballast. The mount is hot-dip galvanized after fabrication and easy to assemble.

Use (1) optional AGMPAD for a protective barrier between the mount and the roof.
