## BRACKETED TOWERS

## STANDARD BRACKETED TYPICAL

25G shown installed with 25GWM wall mount with (1) HBUTVRO

45G/55G attached to a short base with (2) HBUTVRO brackets

## G-SERES (BRACKEIED)

## GENERAL USE

ROHN G-Series Bracketed towers can be installed adjacent to buildings using a bracket to secure the tower in one or two locations along the height of the structure.

## FEATURES

- Completely hot dip galvanized after fabrication to provide absolute corrosion protection.
- Cross bracing is formed by a continuous solid rod bracing fashioned into a zig-zag pattern for strength.
- Pre-engineered loading charts to meet varying individual specs and site conditions.
- Typical uses include small dishes, broadband, security and two-way communication.

1. Tower designs are in accordance with ANSI/EIA-222-F.
2. All towers must have"fixed bases". Pinned bases must not be used.
3. Designs assume one $5 / 8^{\prime \prime}$ transmission line on each face (total $=3$ ), symmetrically placed.
4. Antennas and mounts assumed symmetrically placed at tower apex.
5. Allowable antenna areas assume all round antenna members.
6. Allowable flat-plate antenna areas, based on EIA RS-222-C, may be obtained by multiplying areas shown by 0.6.
7. All brackets are to be ROHN (P/N HBUTVRO).
8. The interface of tower brackets to supporting structure is to be designed by others and must support a minimum horizontal force of 815 lbs .

## FOUNDATION INFORMATION

MAX REACTIONS
Moment $=1,563 \mathrm{ft} . \mathrm{lbs}$. Shear $=211 \mathrm{lbs}$. Vertical $=600 \mathrm{lbs}$.

VOLUME OF CONCRETE
Square Pier $=1.0$ cu.yds. Round Pier $=0.8 \mathrm{cu} . \mathrm{yds}$.

1.Tower designs are in accordance with ANSI/EIA-222-F.
2. All towers must have "fixed bases". Pinned bases must not be used.
3. Designs assume one $1 / 2^{\prime \prime}$ and one $7 / 8^{\prime \prime}$ transmission line on each face (total=6), symmetrically placed.
4. Antennas and mounts assumed symmetrically placed at tower apex.
5. Allowable antenna areas assume all round antenna members.
6. Allowable flat-plate antenna areas, based on EIA RS-222-C, may be obtained by multiplying areas shown by 0.6 .
7. All brackets are to be ROHN (P/N HBUTVRO).
8. The interface of tower brackets to supporting structure is to be designed by others and must support a minimum horizontal force of 1810 lbs .
